```

USAGE:

To enable monit you need to add `monit_enable="YES"` to `rc.conf` file.
 Before running monit you have to configure `monitrc` file.
 There is
 example configuration file `monitrc.sample`.

```

/usr/local/etc/monitrc.sample

```

```

*****
*****

```

```

# Add the following lines to /etc/rc.conf to enable monit:
# monit_enable (bool):      Set to "NO" by default.
#                           Set it to "YES" to enable
monit
# monit_flags (str):        Flags passed to monit on
startup.
#                           Default is "".
#

```

Création d'un test ping avec monit :
microferennes.dyndns.org

```

root@vks36337:~# aptitude install monit
The following NEW packages will be installed:
  monit
0 packages upgraded, 1 newly installed, 0 to remove and 0

```

```
