USAGE:

To enable monit you need to add `monit_enable="YES"` to `rc.conf` file.
Before running monit you have to configure monitrc file.
There is
example configuration file `monitrc.sample`.

`/usr/local/etc/monitrc.sample`

```
*****
*****
```

Création d'un test ping avec monit :

```
# Add the following lines to /etc/rc.conf to enable monit:
# monit_enable (bool):      Set to "NO" by default.
#                           Set it to "YES" to enable
monit
# monit_flags (str):        Flags passed to monit on
startup.
#                           Default is "".
#
```
